REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art of DEGEN (US 4,835,212) and DEGEN (US 4,855,343) both disclose composition comprising starch and monomer. The intrinsic viscosity of the starch before it is degraded in either of the disclosures of DEGEN is greater than 1 dl/g. Next the starch is degraded and then incorporated into the composition. The degraded starch of either disclosure of DEGEN has intrinsic viscosity of 0.08 dl/g or less. The prior art of DEGEN therefore does not disclose the starch required by the independent claim of the present invention.

The updated search report resulted in several references that include KIGHTLINGER (US 4,301,017) and (US 4,375,535), NGUEN (US 5,130,395) and LUEBKE (US 6,040,379) all of which utilize degraded starch with low viscosities such as those in the disclosure of DEGEN.

The IDS supplied by the applicants discloses one particular document (WO 00/46264), which discloses the composition taught by the present invention. This document however, does not qualify as a prior art since its publication is after the filing date of the PCT priority document of the present invention, which is in English language. The other documents do not disclose starch of the present invention, which has intrinsic viscosity of greater than 1.0 dl/g and which starch is cationized or anionized.

In view of the above comments pending claims 1-30 are passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
